

Think Universe! ALL IS ONE

What is 'All Is One' about?

All is one is the pilot phase of a novel approach to science education for primary KS2 students. All is one takes its name from the modern discovery that everything we see in the universe, including ourselves, is made out of the very same fundamental building blocks assembled together at different stages along unimaginable periods of time.

How Does it work?

Classroom delivery is based on the Open Investigatory Practical Work using a novel methodology of Question Line, where observation and independent thinking lead the pupils to be in charge of their own learning process. This project has been successfully piloted in London primary schools under partner grant from the Royal Society.

In this work shop we will combine our knowledge and imagination to understand the invisible world of our Universe where everything is made of One tiny building blocks!
