

# Europe Code League Project Video

## Instructions

Present your project in an interesting, informative and inspiring way. The viewer should have a good idea what your project is about but still want to know more.

Use the first 30-45 seconds to tell everyone where you are from and present your school and your team. For inspirations watch the team introductions from the Europe STEM League: <https://bit.ly/2wi8Lfu>

The maximum length for your video is 2 min 30 sec including credits.

Make your video in English, no subtitles.

## Further information

**16:9** The format of the video should be 16:9 because it is the standard for many video portals such as youtube.

Make sure the music in your video has a suitable license (best is CC BY). You can find some music here: [creativecommons.org/legalmusicforvideos](https://creativecommons.org/legalmusicforvideos)

Use landscape format when you record your video.

Make sure that there is no copyright infringement with any of the material you use in your video.

The ideal resolution for your video is 1920 x 1080. If you do not have the equipment to record in this resolution you can also use 1280 x 720.

If you show people in your video ensure you have their signed consent. In case of underage students it needs to be the signature of the parents or legal guardians.

You do not need a video camera to record your video. Tablets or smartphones are enough.
