

# Equipping students with the relevant skills for the future

Science on Stage Europe is a network for primary and secondary STEM teachers to exchange best practice teaching concepts and ideas. We are from teachers for teachers right across Europe. Our ultimate goal is to improve STEM education by supporting the teachers' continuous professional development. Through this, we provide children and young people the skills and competences to actively bring about changes in society such as digitalisation and sustainable development. Science on Stage reaches 100,000 STEM teachers in over 30 countries.

Teachers as multipliers → inspire students → responsible citizens
