University
Budapest, Hungary

The chemistry is theatre,
theatre of the electrons. Atoms, ions or
molecules are only stage, in which
the electrons are the main characters.

Method

I try to influence all their senses. While
the chemical and physical „scenes” (the
sight of phenomena and experiments)
give visual stimuli and direct
observation help to prove the theory
behind, the didactic figures and
interesting pictures of my slide show
help to follow and to understand the
processes. The topics furthermore
extracted by the
pop/rock/contemporary music and songs
played as a part of the show.

I try to evoke the most
important events of
evolution with chemical
reactions

Result

All this together help to sense
and enjoy the „scene”, the story,
for example „Time travel” from
Big Bang - through the
emergence of the Solar system
and Earth – to the time when the
life on Earth appears, finally with
the human being.
