

The European Science Teachers' Network

**FROM
TEACHERS
FOR
TEACHERS**

Science on Stage Europe brings together STEM teachers from across Europe to exchange best practices, teaching ideas and concepts with passionate colleagues from over 30 countries. We believe that the best way to improve science teaching and to encourage more schoolchildren to consider a career in science or engineering is to motivate and inform their teachers. Our non-profit organisation was founded in 2000 and reaches 100,000 teachers Europe-wide.

The countries involved are:

Science on Stage Festival

Every two years, a member country of Science on Stage Europe organises Europe's largest STEM teaching festival. Around 450 primary and secondary school teachers from across Europe come together to share innovative classroom ideas, exchange best practices and build international collaborations.

Participants present their projects at exhibition stands, workshops and on stage. They are selected through national events organised in the participating countries.

For more information about the festivals, visit our website.

Activities

Science on Stage Europe and its member countries offer a wide range of activities for STEM teachers. All of them are designed to share innovative teaching ideas, foster collaboration and bring the inspiration of the European festivals into classrooms across Europe.

Teacher training

Organised by Science on Stage member countries, the training events enable teachers from our network to disseminate and scale innovative STEM teaching practices across Europe.

Travel scholarships

Teachers from different countries who participated in the festival can meet again to continue their work and to develop joint projects.

International projects

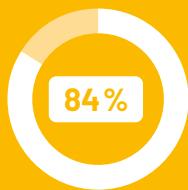

Working groups of international teachers develop materials for their colleagues in Europe. Science on Stage publishes these concepts and makes them available for everyone free of charge.

Teaching materials

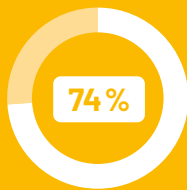

Science on Stage publishes teaching materials developed by teachers for teachers in different languages and spreads them across Europe.

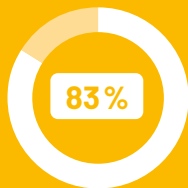

Science on Stage inspires teachers, but how exactly do teachers profit from taking part?

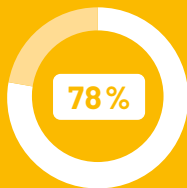

84 % of participating teachers **have incorporated** ideas that were presented at Science on Stage events into their own lessons.

74 % of participating teachers **have conducted** teacher training activities based on learning from Science on Stage and thus functioned as multipliers.

83 % of participants still **maintain the new** international contacts they established during the festival, even nine months later.

78 % of participants stated that **Science on Stage** has a **significant long-term effect** and 91 % would like to apply to participate in the next festival.

The participant survey took place before, during and nine months after the Science on Stage festival 2024.
